	Abstract	The work contains an overview on the results of the national wetland inventory project carried out in Romania in 1997 – 2000 period. Using a standard file for wetland characterization there were gathered recent and historical data on the ecological, legal, administrative etc. status of several dozens of sites. The available information was analyzed in order to select those wetlands from Romania that are eligible for inclusion into the List of Wetlands of International Importance. Based on the results of the analyses there have been selected 30 wetlands of prior conservative interest, out of which 12 could fulfill the criteria for Wetlands of International Importance.
	Creation date	2001-09-10
	Publication date	2001-09-10
	Last revision date	2001-09-10
	Lineage	The publication is based on the results of the studies carried out in 1997 - 2000 period, focused on the distribution, types and main features of the wetlands from Romania.
